

Master your color.

Discover the freedom to create.

From capture to edit to print, Apple's integrated color solution gives you the color you always imagined. With pinpoint accuracy—every time.

With an Apple Cinema Display and a Power Mac G5 using Mac OS X Tiger, you can manage your color flawlessly and efficiently. This integrated color management solution gives you reliable, consistent, and predictable color from input through output. So you can spend less time and money on proofs and corrections—and more time creating.

Upgrade to an integrated color-managed system.

Do it faster with a Power Mac G5.

Designed to meet the high-performance, no-compromise requirements of demanding professionals, the new dual 2.7GHz PowerMac G5 is expandable to 8GB of SDRAM.

Feast your eyes on true color.

The 23-inch Apple Cinema HD Display delivers superb color in resolutions of up to 1920 by 1200 pixels. For the best possible monitor calibration, get GretagMacbeth's Eye-One Display.

Host a virtual meeting of the minds.

Stay connected with your creative team at corporate headquarters—or clients anywhere in the world—using the iSight camera and iChat AV software.

Go wireless.

Use AirPort to create a turbocharged wireless network at your office.

Learn to color-manage your workflow.

Read *Color Management in Mac OS X* for easy-to-understand, step-by-step instructions on setting up your color-managed workflow.

Boost productivity with color-aware applications for color-critical work.

- Mac OS X v10.4 "Tiger"
