

Floyd Rose®

ki - PERFORMANCE BRIDGES

The Floyd Rose Tremolo System is used by more professionals throughout the world than any other. No copy can duplicate the patented double-locking design of the Floyd Rose Tremolo System that allows you to lock your guitar in tune at the nut and at the bridge.

The Floyd Rose Tremolo System is engineered like no other Tremolo System. Its high quality steel parts are manufactured to exacting specifications. And it's available in a variety of nut sizes that will fit practically any electric guitar.

THE FLOYD ROSE SPEEDLOADER FIXED BRIDGE

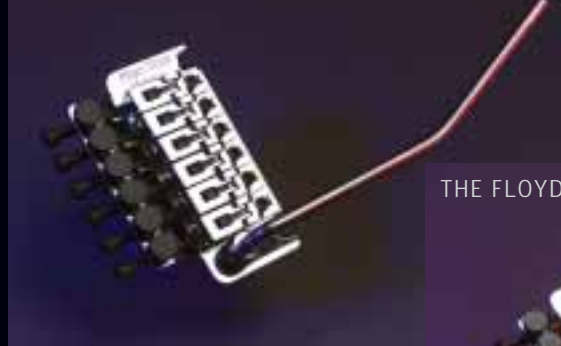

The SpeedLoader Fixed Bridge is the first Floyd Rose bridge designed for the guitarist who does not use a tremolo. As with the tremolo model, the fixed bridge fulfills all the traditional uses of a "hardtail" bridge combined with the ease, accuracy, and stability of the SpeedLoader System.

THE FLOYD ROSE SPEEDLOADER TREMOLO

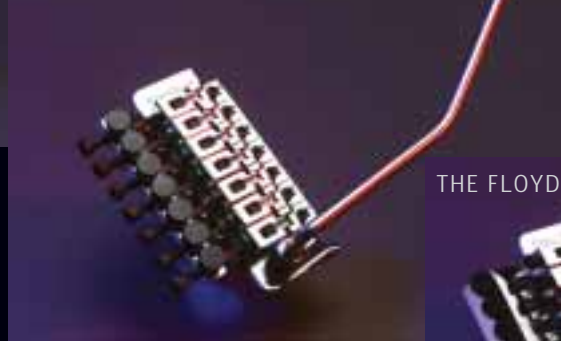

The SpeedLoader Tremolo offers all the versatility of the original Floyd Rose Tremolo™ with the ease and performance of the SpeedLoader System. You can still execute the most subtle tremolo or wildest dive-bombing effects and return to perfect tuning every time. The SpeedLoader tremolo also features the new Floyd Rose TremStopper that enables the player to block the tremolo system with a simple turn of a screw.
