CENTARI iAXE624 USB-GUITAR

1. INTRODUCTION

1.1 Included software

The iAXE624 USB-Guitar comes with a complete software bundle which allows you to start immediately. The software package consists of:

- ▲ Native Instruments "Guitar Combos BEHRINGER Edition"—3 different combos (PC/Mac)
- ▲ Kristal Audio Engine (PC)
- ▲ Audacity (PC/Mac)
- ▲ BEHRINGER USB AUDIO-Driver (PC)

Enjoy the direct access to fantastic "GUITAR COMBOS" of Native Instruments which are to be found on the provided CD with the installation guide and user's manual.

The Native Instruments "GUITAR COMBOS" series combines outstanding sound quality with maximum ease of use and playability.

Classic Combos

GUITAR COMBOS perfectly recreate three classic combos, using the same critically acclaimed technology that has already won GUITAR RIG numerous industry awards. The lovingly emulated tube combos have an absolutely authentic, warm and dynamic sound, producing the purest of tones. The different presets only hint at the wide musical spectrum covered by these classic amps.

Professional Sound

The GUITAR COMBOS utilize the same Dynamic Tube Response technology that was developed for GUITAR RIG, giving the series the same exceptional sound quality. The GUITAR COMBOS are perfectly suited to musicians with little or no experience of professional music software. A computer, sound card*, a guitar and these combos are all that is needed to enjoy the sound of professional studio productions.

The Full Spectrum

The GUITAR COMBO I (AC Box Combo) is the popular role model that revolutionised British pop music. From soft to distorted—this combo has a uniquely inspiring sonic character. The GUITAR COMBO II (Twang Combo) is the epitome of the clean and crunchy blues sound. Over the course of several decades this warm and unmistakable sound has made a valuable contribution to countless hits. Based on the famous tube amps that spawned the guitar legends of the late 60s and early 70s, the GUITAR COMBO III (Plexi Combo) embodies the rock sound. Its distinctive and individual tone can be as warm as it can be hard.

Features

- ▲ Based on award-winning GUITAR RIG amps, cabinets and effects
- ▲ Three unique combos, each with their own characteristic design and sound
- ▲ Intuitive user-interface and particularly easy to use
- ▲ Outstanding, professional sound quality and performance
- ▲ Every combo includes a tuner, noise gate and limiter
- ▲ Additional, individual pre and post effects for each combo
- ▲ Integrated Tapedeck for playback of audio files as well as a metronome
- ▲ Presets included as well as option to save your own additional, personal presets
- ▲ Full MIDI compatibility including MIDI learn functions

After installing the software, you can test 3 different amp simulations for 30 days. Subsequently, you have to choose one of the amps which then needs to be registered on the dedicated NI-BEHRINGER Internet page at:

www.native-instruments.com/comboshop.info.

Here you will find an overview with a brief description of the 3 combos that are provided. Furthermore, the steps of purchase as well as how to use your coupon are described in the top part of the page (see Fig. 1.1). For example, click "Order GUITAR COMBO I" to order Combo I, then follow the instructions found in the NI Online Shop, i.e. the shopping cart.

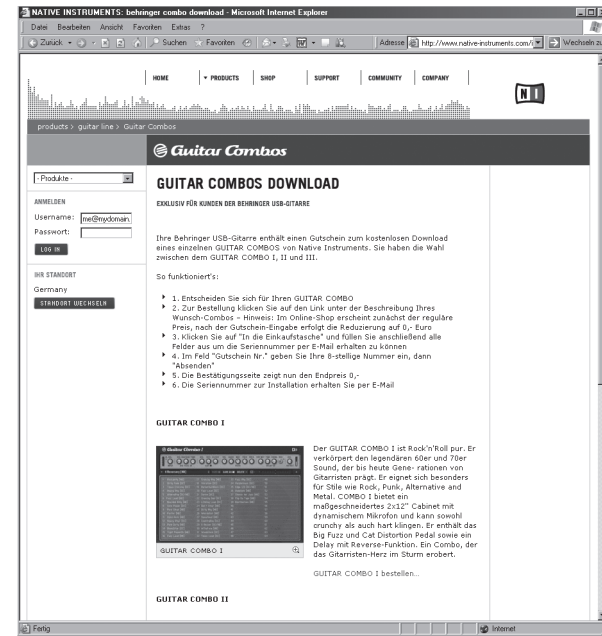

Fig. 1.1: Starting of Online-Shop

Figure 1.2 shows the second step "2. Product Details" found in the NI-Behringer Shop. After that, your purchase is not far off.

1.2 System requirements

To connect the iAXE624 USB-Guitar to a computer, you need a free USB slot.

 **The iAXE624 USB-Guitar is compatible with both PC and Mac computers. Therefore, no installation procedure or drivers are required for the correct functioning of the iAXE624 USB-Guitar. As soon as you connect the iAXE624 USB-Guitar to a free USB slot, it will be recognized as generic USB audio device.**

 **If you want to make use of the included drivers and applications, please observe the system requirements of the respective manufacturers.**

If you want to use the guitar for real-time applications on the PC, e.g. for recording or to use with the provided "Guitar Combos" from Native Instruments, we **strongly** recommend the installation of the included USB audio driver to ensure a low latency (see Chapter 1.3).

To work with the software that comes with the guitar, your computer must meet the following minimum requirements:

	PC	MAC
Operating system	Windows XP	Mac OS X v10.3.x
Processor	Pentium 700 MHz Athlon XP 1.33 GHz	G4 733 MHz
RAM	256 MB	512 MB

1.3 Device drivers and latency

A device driver is an interface that ensures communication between the software (audio application) and the hardware (your iAXE624). In recent years, the PC platform has witnessed the establishment of several different driver models for sound cards. Some of these drivers cannot be used for simultaneous recording and playback or for working with software plug-ins, since they do not support the full performance provided by professional sound cards and cause a long time delay (this is called "latency").

With standard Windows applications, you don't need to worry about which driver is currently being used by the operating system. You only need to select the correct playback device via the Windows "Control Panel".

However, as soon as you start to produce or record computer-based music and work with special audio software such as Cubase, Live, Logic, Traktion, or others, you should make sure that you selected an ASIO driver. This driver model supports the full range of functions offered by your hardware and gives you the best performance. With the USB Audio Driver, we have already included one of the fastest ASIO drivers currently available.

You will normally find the selection of a driver model for computer hardware in the standard default settings of the software you are using. If necessary, check the documentation for your software. Use the control panel to set up a lower latency. The smaller the value, the better. If audio dropouts occur, try increasing the latency in stages.

Things are much simpler with the Mac platform. With OS X operating system, there is only one driver model, the CoreAudio driver. Thus, there's no need to worry about selecting a driver.

2 WINDOWS XP

2.1 QUICK START GUIDE FOR BEGINNERS OR YOUR FIRST SESSION

en

- 1 Start the PC or Laptop.
- 2 Insert the CDROM into your CDROM drive.
- 3 Connect USB cable to PC/Laptop and to BEHRINGER iAXE624 USB-Guitar.
- 4 Allow WINDOWS XP operating system to install NI drivers (4x) automatically.
- 5 Disconnect USB cable from guitar.
- 6 Find folder called *Driver* on CDROM and open folder.
- 7 Double-click on file *Setup.exe* and follow on-screen instructions.
- 8 Unplug / replug USB cable to guitar when prompted.
- 9 Install the software from the folder *NI Guitar Combos* by double-clicking on the file *Guitar Combos Behringer Edition Setup.exe*.
- 10 After installing the software, open one of the Combos.
- 11 Choose the following entries for the Audio Setup, (file > Audio + MIDI settings).

> Interface = ASIO
> Sample Rate = 44100
> Output Device = BEHRINGER USB AUDIO
> OK

- 12 Close audio setup. Connect USB cable and a set of headphones to the BEHRINGER iAXE624 USB-Guitar and play on.

2.2 INSTALLATIONS GUIDE FOR SOFTWARE & DRIVER

BEHRINGER USB-AUDIO DRIVER

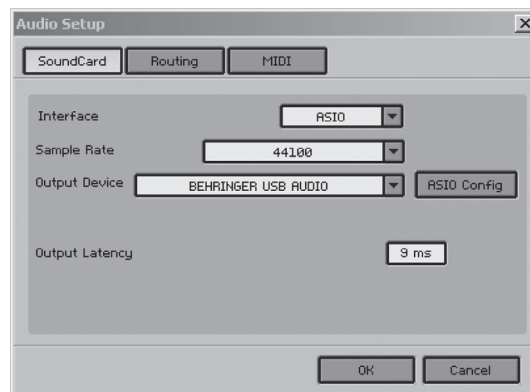

Install the driver as follows:

- 1 From your CD start *Setup.exe* file in the folder *Driver*.
- 2 Follow the onscreen instructions.
- 3 Plug and unplug your guitar when prompted.

NATIVE INSTRUMENTS "GUITAR COMBOS"

Install the software as follows:

- 1 Start the *Guitar Combos Behringer Edition Setup.exe* file which is found in the folder *NI Guitar Combos*.
- 2 Follow the onscreen instructions.
- 3 After installing the software, open one of the combos.
- 4 Press "TRY", when prompted for registry key.

You are now ready to play your iAXE624 USB-Guitar with the virtual combos.

CONFIGURE AUDIO

Open one of the Combos. Choose at the *Audio Setup* window the *SoundCard* tab and select *BEHRINGER USB AUDIO* as your *Output Device*. Configure the latency by selecting the *ASIO Config* button if *Output Latency* exceeds 16 ms.

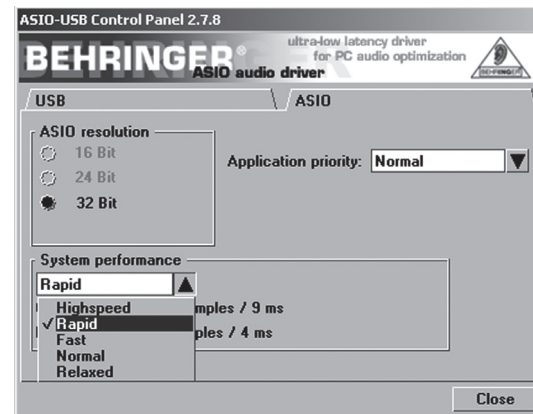

In the USB tab:

- 1 Set the *Device* to *BEHRINGER USB AUDIO*.
- 2 Set the *Output/Input Channels* to 1+2.
- 3 *Samplerate* and *Resolution* parameter is fixed.

In the ASIO tab:

- 1 the *Application priority* should be set to *Above Normal*, unless you encounter system stability problems.
- 2 the *System performance* should be set to *Highspeed* or *Rapid* to provide short latency values. If you encounter audio dropouts try the *Fast ONLY* settings.

2.3 TROUBLESHOOTING FOR iAXE624 USB-GUITAR

Fault: USB AUDIO Codec not recognised by Windows, no entry for USB AUDIO Device in Windows Device Manager

- ▲ check USB connection. If possible try using a different USB cable or USB port.
- ▲ connect iAxe USB-Guitar directly to PC or Laptop, not via a USB hub.
- ▲ ensure that USB port is functional (does it work with digital camera, printer, etc.?).
- ▲ if necessary, check that USB ports are activated in host system BIOS.

Fault: Windows driver installation not completed (eg. Windows error code 10, error code 39)

- ▲ check USB connection. If possible try a different USB cable or USB port.
- ▲ connect iAxe USB-Guitar directly to PC or Laptop, not via a USB hub.
- ▲ if possible, try to install on another PC or Laptop.

Fault: Installation of BEHRINGER USB AUDIO driver failed with "Error 0x0006"

- ▲ check USB connection. If possible try using a different USB cable or USB port.
- ▲ close application, re-run the "setup.exe" file at the BEHRINGER USB AUDIO from CDROM.
- ▲ download new/up to date ASIO driver files from www.behringer.com

Fault: ASIO-USB Control Panel 2.7.8 does not show BEHRINGER USB AUDIO as Device

- ▲ check USB connection. If possible try a different USB cable or USB port.
- ▲ connect iAxe USB-Guitar directly to PC or Laptop, not via a USB hub.
- ▲ close application, re-run the "setup.exe" file at the BEHRINGER USB AUDIO (ASIO driver) and try again.

Fault: Latency time too long

- ▲ reduce latency setting.
- ▲ start the "ASIO-USB Control Panel 2.7.8" from within the audio software (may be called "ASIO configuration" or similar).
- ▲ USB Device = BEHRINGER USB AUDIO.
- ▲ click on the "ASIO" tab.
- ▲ System Performance = "rapid" (or even "highspeed").
- ▲ "close".

Fault: Clicks or dropouts in recording (latency time too short)

- ▲ increase latency setting.
- ▲ see step 2-4 in "Fault: latency time too long"
- ▲ System Performance = normal.
- ▲ "close".
