- Power Supply Included

Features:

The Vocal 300 is a full featured vocal effects processor designed for live applications. Whether special effects or straight forward vocal processing are your forte, the Vocal 300 has a solution to meet your needs. Several vocal "characters" let you transform your voice from monsters to robots to chipmunks. For those seeking straight forward effects processing, the Vocal 300 features professional studio quality compression, equalization, modulation and pitch effects, delay, and reverb. The built in expression pedal can take full advantage of these effects. Whether controlling delay and reverb levels, or extreme pitch bending via the famous DigiTech Whammy™, the Vocal 300 can let any singer create a performance that is truly unique. Presets are accessed using the Up and Down footswitches, and an effects Kill switch bypasses all processing. Full parameter control of all settings is done via the 4 knobs at the bottom of the effect matrix. No matter what your vocal style, the Vocal 300 will give you just what you need and more.
