Advanced Sound Engine

Driven by a powerful new audio processor, the Fantom-G provides new sonic depth and versatility. With twice the wave-ROM capacity of its predecessor, it contains a treasure trove of Roland's world-famous SRX-quality sounds, but what really sets this instrument apart is its new ARX expansion, which allows additional SuperNATURAL sound-sets and fully dedicated synth and effects engines to be added to this already powerful live workstation.

SuperNATURAL™ ARX Expansion

SuperNATURAL

Fantom-G provides ARX slots that accommodate two SuperNATURAL expansion boards. SuperNATURAL is Roland's unique behavior-modeling technology that enables a new level of organic, emotional expression previously unattainable in synthesizers. Applied to traditional-instrument sounds, SuperNATURAL enables the delicate, organic tonal changes and playing nuances of real musical instruments. It's also a powerful tool for electronic and non-traditional sounds, breathing amazing new life and expression into synthesis.

Power Sequencer Onboard

The Fantom-G is the first Roland instrument to feature Roland's newly designed power sequencer. In conjunction with the large-size LCD, this pro-level composition tool provides 128 tracks (including 24 audio tracks) in a fully intergraded audio/MIDI graphical environment. A mouse can be also incorporated for computer-like speed and ease. Other convenient features include combo XLR and TRS connector, phantom power for condenser mics, Hi-Z input for guitar and bass, and line input.

Luxurious Extra-Wide LCD

One look and touch and you'll know that the Fantom-G is an instrument without equal. Only the highest-quality materials have been used to create this dream synth, with a stylish, futuristic design that will turn heads. Front and center is the extra-large 8.5" wide TFT color LCD for enhanced productivity. A first-class assortment of hands-on controls is provided as well, including eight sliders, four knobs, and ten buttons below the LCD.

Amazing FX

Fantom-G is loaded with a state-of-the-art effects engine, with multi-effects available for each Fantom-G sound/part. In 16-part multi-timbre mode, up to 22 effect routings can be used simultaneously. Create complex setups with 16 insert effects per multi-timbral patch group, plus global reverbs and choruses. Mastering effects are provided for polishing songs created with the onboard sequencer.
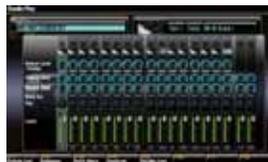

Supreme Keyboard Feel & Action

The Fantom-G8 is outfitted with Roland's top-of-the-line PHA II "Ivory Feel" keyboard. This amazing keyboard technology reproduces the real surface feel of ivory acoustic piano keys providing a familiar stability and comfort to the pianist. The white keys have a two-piece structure which reduces the surface 'click' noise when playing. The newly developed keyboard surface material is designed to absorb moisture, ensuring a secure, slip-proof feel that your fingers will love.

Introducing SuperNATURAL™ Expansion Boards

Fantom-G is the first instrument equipped with Roland's revolutionary ARX expansion-board slots. Each ARX board is a synth itself, powered by Roland's proprietary SuperNATURAL sound technology for organic, emotional expression. Optimized effects and custom graphic interfaces are exclusive to each ARX board. ARX allows you to create unique instruments with the highest-quality sounds and organic control.

ARX-01 Drums

The ARX-01 Drums Expansion Board is a music-production dream. Thanks to its SuperNATURAL voice engine, you have complete control of the elements of each drum, such as shell depth and muffling. Once each drum is crafted the way you want, you can further refine it with the built-in compressor/EQ, reverb, powerful multi-effects, and an onboard mixer for adjusting the volume and pan position.

ARX-02 Electric Piano

With stunning SuperNATURAL sound, detailed control, and ultra-realistic amp modeling, the ARX-02 Electric Piano Expansion Board puts new expression and realism into a classic instrument category. Change the position of the pickup, and choose from five amazing amp models with dynamic control. Volume and tone change smoothly and realistically as you play, based on the strength and weakness of the keyboard performance.
