

midi express 128

8 x 8 expandable bus-powered MIDI interface

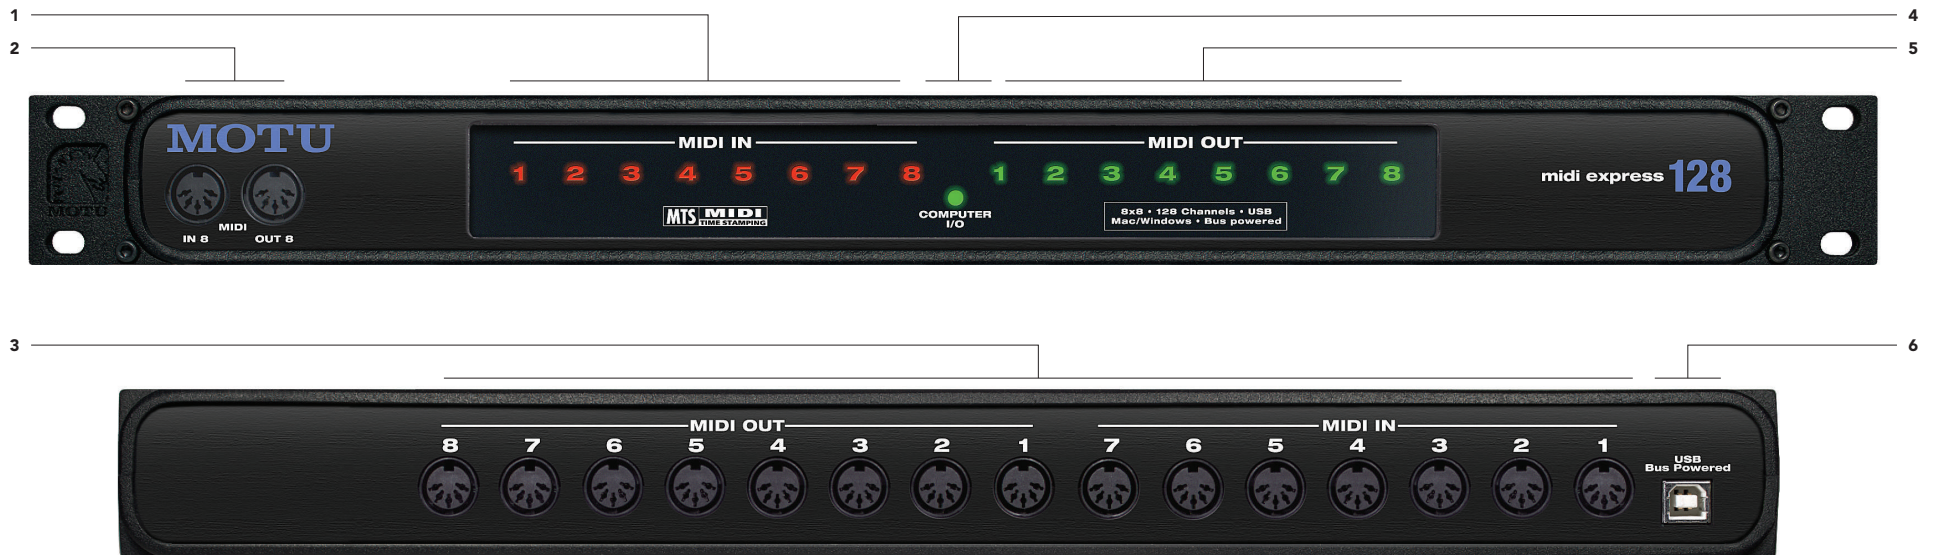

Built from the same technology found in MOTU's flagship MIDI Timepiece, the MIDI Express 128 is a professional MIDI interface that provides plug-and-play connectivity to any USB-equipped Macintosh or Windows computer.

The Express 128 provides 8 MIDI IN, 9 MIDI OUT, 128 MIDI channels and compatibility with all Macintosh and Windows software.

The MIDI Express 128 takes full advantage of USB, giving you high-speed MIDI throughput, sub-millisecond timing accuracy, support for "hot-swapping" and plug-and-play expansion. Need to connect another sound module or synth? No problem. Just add another MOTU USB MIDI interface via any available USB port. And the Express 128 is powered by USB – no wall wart or AC plug.

No other MIDI interface offers this much value and performance at such an affordable price.

1 MIDI input indicators

Each MIDI input has a large, bright indicator light so you can monitor MIDI activity from across the room.

2 Front panel I/O jacks

For convenience, MIDI in/out ports are supplied right on the front panel, enabling you to quickly connect gear without reaching behind your rack.

3 8 x 8 MIDI jacks

Eight independent MIDI inputs and outputs supply 128 separate MIDI channels — expandable to over a thousand channels via a powered USB hub.

4 Computer I/O indicator

Dedicated LED for computer I/O activity helps you troubleshoot problems in your system.

5 MIDI output indicators

Each MIDI output has a large, bright indicator light so you can monitor MIDI activity from across the room.

6 USB connector

Standard USB connection provides high-speed I/O to the computer. Also provides power to the Express 128. No separate power cable is required.
