*analog guitar effects pedals*

## The FACTOTUM Bass Suboctave Overdrive

*My heartiest congratulations to you for purchasing a Red Witch FACTOTUM !  
The device you are now holding in your hands offers several unique features, which you cannot find anywhere else. I strongly recommend that you read on to discover the full potential of your new pedal!*

*The FACTOTUM is a bass guitar pedal – it's uniquely voiced to retain all those vital low end frequencies. It holds two effects in the one box – a massive analog suboctave effect and a bass tuned analog overdrive. Each has it's own footswitch – you can use them independently or simultaneously..... You and them..... a trio..... Ménage e Bass!!!*

### Controls

#### Octave

*Octave Mix – This controls the mix of analog suboctave and dry signal. Turned fully counterclockwise you will only hear the dry, unaffected signal – indistinguishable from your bypassed signal (go on, click the bypass switch – do you hear any difference? All the low end is retained... shazzam!!!). As you turn the dial clockwise you'll hear more and more of the suboctave – blending with the dry signal – until you reach the fully clockwise position – where all you will hear is bowel rumbling suboctave.*

*Octave Footswitch – This brings the octave effect into the signal path. Truebypass switching.*

#### Overdrive

*D Mix – This controls the mix of overdrive effect and dry signal. Turned fully counterclockwise you will only hear the dry, unaffected signal – indistinguishable from your bypassed signal. As you turn the control clockwise you will blend in more and more of the overdrive sound – fully clockwise for 100% wet.*

*D Tone – modify the overdrive tone – clockwise for more top end, counterclockwise for more bottom end.*

*D Volume – This sets the maximum volume level of the overdrive – above, below or at unity gain.*

*Drive – The level of overdrive – start fully counterclockwise for no overdrive and dial it gradually clockwise to overdrive the signal more and more.*

*Drive Footswitch – This brings the overdrive effect into the signal path. Truebypass switching.*

*Power - The FACTOTUM can be powered from either a nine volt battery or an external nine volt adapter (Boss PSA styled is ideal - though anything with a 2.1mm barrel plug with a negative center pin is fine.). The unit draws 45ma or current.*

*Keep it clean - only use a soft dry cloth on your pedals finish - abrasives will ruin the chrome and speed up the wear on the lettering. The lettering will eventually wear off, be prepared for this - ensure you have enough canned goods and fresh drinking water.*

*Do Not Treat it Rough - This includes; immersing it in beer or other liquids, throwing it at stuff or people, rewiring it, setting it on fire or using it as a weapon. It is a tough pedal but everything lasts a little longer with a little love.*

### Red Witch Analog Limited Lifetime Warranty

*All electronics carry a lifetime warranty providing the owner purchases the pedal new and retains proof of purchase.*

*All switches, jacks, potentiometers and other mechanical parts are warranted for one year after the date of purchase or for two years when the owner returns the following information to [warranty@redwitchanalogpedals.com](mailto:warranty@redwitchanalogpedals.com) - Name of purchaser, date of purchase, location of purchase, your email address and pedal serial number. As well as an extension of your mechanical warranty you will be informed of new pedals and other guitar gizmos as we invent them!*

*All external fixtures finish, lettering and knobs are not warranted. Damage or failure of product due to misuse will void the warranty. All repairs must be made by Red Witch Analog only. Unauthorized repair/modification will result in void of warranty.*
