

MCA100 MIC CONTROL ADAPTER

EN

In-Line XLR* Mic Control Button for TC HELICON Vocal Effects Processors

The MCA100 allows any standard dynamic microphone to take advantage of the Mic Control feature found in many of the TC HELICON vocal processing products. When used with smaller stompbox-style pedals, the Mic Control will usually toggle the bypass or on/off function. With more complex processors, a number of parameters can be assigned to Mic Control. Consult the product's documentation for details.

Some of the single stompbox pedals require the Mic Control feature to be enabled manually. Press the small button on the side of the pedal to allow the MCA100 to control the on/off switching.

Note – it is possible that your vocal processor may need a firmware update in order to work with the Mic Control functionality. Visit tc-helicon.com/voicesupport to download the VoiceSupport application and update your product's firmware.
