## MPX 1 Version 1.10
## User Guide Addendum

## Version 1.10 Features

### MPX R1 Compatibility
Version 1.10 software enables two-way communication with the MPX R1 MIDI Remote Controller.

When the MPX 1 and the MPX R1 are connected, the MPX 1 will automatically detect the MPX R1. If, for any reason, connection is broken, the MPX 1 will display

**Remote Connection Lost**

### Improved Knob Ballistics
Improved Knob ballistics speed up the selection of programs in any of the Sort and Search functions.

### New Parameters
A **Bypass Level** parameter (in the **Audio** row of the **System** menu) allows smooth program load when the MPX 1 is used in a guitar amp effects loop.

An **MPX1/MPXR1** parameter in the **Initialize** row of the **Sytem** menu allows you to reinitialize the MPX 1 for use with the MPX R1.

### New Presets
New factory presets have been designed to take advantage of the MPX R1's remote capability. The MPX 1 presets have been re-ordered so that all of the guitar presets are grouped from 100-159. The Preset Menu has been revised accordingly.

Other than those listed here all presets are identical but may be in new locations. Any program created in Version 1.0 will work in Version 1.10 with the following exception:

Programs created with 3 merges in the Routing Map will be reduced to 2 when loaded. (None of the Version 1.0 presets used more than 2 merges.)

### New Programs added in 1.10

| | |
|---|---|
| 101 | Toe Wah Chrs |
| 103 | ChorusDelay+ |
| 104 | Trem Verb+ |
| 105 | ChorDlyPan+ |
