

## DJiO

### DJ AUDIO INTERFACE FOR ALL DJ SOFTWARE

**FOR THE ON-THE-GO COMPUTER DJ AND PRODUCER.** The DJiO is compact and rugged enough to live in your gig bag, but powerful enough to provide solutions for a wide range of computer audio needs.

DJiO gives software-based DJs, performers and producers a range of options for outputting their music. With the DJiO, DJs and Producers can pass audio from their software application of choice through the USB 2.0 connection on the DJiO to a traditional mixer (for multi-channel mixing) using the built-in pair of stereo RCA connections. In addition, DJiO features 1/4" Microphone input and pass-through to 2 pairs of stereo audio connections (4 in all), for quick and easy voiceovers.

The DJiO features ultra-low latency audio (via ASIO drivers), with 2 independent RCA stereo outputs, a mic input with adjustable gain on stereo pair #1 and a 1/4" stereo headphone output on stereo pair #2. The DJiO is USB bus powered but can also operate with a 9V DC external power supply (sold separately).

### FEATURES
