

Reason is growing Time to update!

Reason 8.3 is the latest update to Reason 8. A free update for all Reason 8 owners, the latest version brings a convolution reverb to Reason and several workflow improvements. All Reason 8 customers will get the new version for free when it's released on June 30th.

Highlights in Reason 8.3

RV7000 mkII

Explore creative reverb sounds with RV7000 mkII! The new version of Reason's cornerstone reverb effect turns RV7000 into a fully featured convolution reverb. Load any of the supplied impulse responses or create your own otherworldly reverb effects by sampling or loading your own impulse responses.

Zoom to Selection

Move quickly from birds-eye view to close-up. Hit the Z key to zoom to your selection and hit Z again to zoom back out. This is a real time-saver when editing and arranging!

MIDI in the Rack

Some Reason users spend most of their creative work in the rack view. Now you can select what device receives your master MIDI controller input directly from the rack, without having to go to the sequencer.

Browse where you are!

Call up Reason's browser from where you work! The new browser introduced in Reason 8 offers a vastly improved workflow, but was previously only accessible from the main window. After feedback from users who use Reason with the rack in a detached window, you can now access the browser from there as well.

Additions since version 8.0

Support for the Propellerhead music sharing and collaboration service

Find inspiring music to remix or develop, share your own creations with friends or with the world.

Auto update function to automatically download and install updates

Reason will tell you when an update is available and download and install the needed components.

More colors in the sequencer

With twice as many colors available in the sequencer, your arrangements will look better and be easier to navigate.

Revert browsing to return to previous loaded patch

A much requested feature since the introduction of Reason's new browser in version 8: you can easily get back to where you started after browsing for sounds.
